

Attunity Enhances Data Governance Capabilities for On-Premises and Cloud Data Lakes

June 19, 2018

Announces certified metadata integration for Apache Atlas and Hortonworks DataPlane Solution to be demonstrated live this week at DataWorks Summit in San Jose, CA

BURLINGTON, Massachusetts, June 19, 2018 /PRNewswire/ -- Attunity, Ltd. (NASDAQ CM: ATTU), a leading provider of data integration and big data management software solutions, announced today new product enhancements to its data integration platform that improve data governance capabilities for organizations moving data to clouds and data lakes. As these new analytic systems grow in size and scale, a lack of understanding and confidence in the data can be one of the largest barriers to adoption. Attunity's enhanced metadata and data lineage capabilities are designed to help users understand what the source of the data is, and highlight any modifications or transformations within the Attunity platform that have been applied.

These enhanced capabilities, which now include a unified repository for Attunity-sourced data and metadata, are designed to enable interoperability with third-party metadata repositories to support enterprise-class data governance, compliance and data management. Now certified on Apache Atlas and Hortonworks DataPlane, the Attunity solution will be demonstrated live at the DataWorks Summit in San Jose, CA, from June 19-21.

The Attunity platform efficiently manages and monitors data replication and integration to improve overall productivity, performance and security. Expanded capabilities include:

- **Unified view of metadata** – As Attunity moves and transforms data in the pipeline, it provides a complete view of data sources, targets and all metadata changes.
- **Synchronization with third-party repositories** – Certified support for Apache Atlas and Hortonworks DataPlane with planned support for other platforms expected later in 2018.
- **ODPi interoperability** – Attunity is working closely with the leaders of [the Open Data Platform initiative](#) (known as ODPi) to promote the emerging metadata interoperability standard in the industry and encourage other business leaders to become involved. To support this initiative, the Attunity platform is expected to be fully integrated with ODPi later in the year.

"Without the complete view of data and metadata as it is loaded into Hortonworks DataPlane, enterprises struggle to maintain proper end-to-end data compliance internally and to meet industry regulations. With Attunity's platform, we've empowered Hortonworks DataPlane and Data Steward Studio customers with better information about their data. Now they are able to gain the missing data lineage and insight into transactional data source information that was previously inaccessible. Apache Atlas and Apache Ranger are key to making this possible for customers," said **Jamie Engesser, Senior Vice President of Product Management at Hortonworks**.

"One of the challenges and biggest gaps in the data governance lifecycle has been capturing metadata at the source system," explained **John Mertic, Director of Program Management at ODPi**, an open source foundation committed to simplification and standardization of the big data ecosystem. "Attunity's commitment to ODPi compliance showcases its end-user focus on enabling integration across data management solutions. We are excited to continue our work together to encourage data interoperability and adoption of much-needed data management standards."

"Attunity is solving one of the main issues associated data lakes and cloud repositories by delivering both the data and the necessary metadata insights. Now data scientists and business users know where the data came from and how it may have been modified— all in a single view. As a result, businesses can act more confidently and with greater agility," said **Dan Potter, VP Product Management and Marketing at Attunity**. "Additionally, our recent certifications with Hortonworks and Apache Atlas demonstrate Attunity's commitment to embracing metadata interoperability standards to enable enterprises to have better data governance, quality and management."

Safe Harbor Statement

This press release contains forward-looking statements, including statements regarding the anticipated features and benefits of Replicate Solutions, within the meaning of the "safe harbor" provisions of the Private Securities Litigation Reform Act of 1995 and other Federal Securities laws. Statements preceded by, followed by, or that otherwise include the words "believes", "expects", "anticipates", "intends", "estimates", "plans", and similar expressions or future or conditional verbs such as "will", "should", "would", "may" and "could" are generally forward-looking in nature and not historical facts. For example, when we say that the Attunity platform is expected to be fully integrated with ODPI later in the year, we use a forward-looking statement. Because such statements deal with future events, they are subject to various risks and uncertainties and actual results, expressed or implied by such forward-looking statements, could differ materially from Attunity's current expectations. Factors that could cause or contribute to such differences include, but are not limited to, risks and uncertainties relating to: our history of operating losses and ability to achieve profitability; our reliance on strategic relationships with our distributors, OEM, VAR and "go-to-market" and other business partners, and on our other significant customers; our ability to manage our growth effectively; acquisitions, including costs and difficulties related to integration of acquired businesses and possible impairment charges; our ability to continue to expand our business into the SAP market and the success of our Gold Client offering; timely availability and customer acceptance of Attunity's new and existing products, including Attunity Replicate, Attunity Compose and Attunity Visibility; fluctuations in our quarterly operating results, which may not necessarily be indicative of future periods; changes in the competitive landscape, including new competitors or the impact of competitive pricing and products; a shift in demand for products such as Attunity's products; the impact on revenues of economic and political uncertainties and weaknesses in various regions of the world, including the commencement or escalation of hostilities or acts of terrorism as well as cyber-attacks; and other factors and risks on which Attunity may have little or no control. This list is intended to identify only certain of the principal factors that could cause actual results to differ. For a more detailed description of the risks and uncertainties affecting Attunity, reference is made to Attunity's latest Annual Report on Form 20-F which is on file with the Securities and Exchange Commission (SEC) and the other risk factors discussed from time to time by Attunity in reports filed with, or furnished to, the SEC. Except as otherwise required by law, Attunity undertakes no obligation to publicly release any revisions to these forward-looking statements to reflect events or circumstances after the date hereof or to reflect the occurrence of unanticipated events.
